

[ PVC ]

Leave it to chance and there's always the chance you could be wrong. It is with this logical train of thought running through our collective heads that we developed the Passive Volume Control. Yes, our train left the station and any remaining chance of error wasn't on it. Our PVC allows you to max your DAW's digital outputs to maintain every significant bit so you get all the music at the right level every time - a must-have for any computer based music or video production systems.

## [ SPECIFICATIONS ]
