

[A1]

[X1]

[iWS]

Mention an in-wall subwoofer to people who take their music and movies seriously and they will have a name for you. It would be “girly man.” Why? Simple. In-wall subs are usually really weenie. Not now. The NHT iWS in-wall subwoofer will crack your huevos from three doors down – from an enclosure that fits perfectly in a standard residential 2" x 4" wall. We could tell you how, but then we’d have to kill you. Suffice it to say bass response to 27Hz. Yes campers, their goes the neighborhood.

[SPECIFICATIONS]
